Should landowners negotiate a solar lease agreement?

On the other hand, landowners are usually motivated to limit the land affected by solar lease agreements to retain control over non-solar-related uses and leasing opportunities. Therefore, careful consideration and negotiation of the land subject to the lease agreement is crucial early in the process.

What is a solar land lease?

A solar land lease is an agreement between a developer and a landowner where the landowner rents land to a developer to house photovoltaic solar arrays and develop solar energy. A solar land lease typically is a long-term agreement spanning twenty to forty years.

What is a pre-lease agreement for a solar farm?

Once a developer approves your land, they offer two possible pre-lease agreement options: Lease option: This option provides the lease terms but gives the developer time to decide whether to commit to a lease with you. For instance, they may need to determine how much land they will ultimately need for the solar farm.

Can a landowner enter into a solar energy agreement?

Almost every solar energy agreement that contains an option will make the option "exclusive" which means the landowner cannot enter into any other agreement for solar development on the land (and perhaps any other form of energy development) during the option period.

Should landowners consider a solar energy lease?

For many landowners, any prior experience with resource development agreements may be in the form of oil and gas leases, and as a result, they try to apply those experiences to examining the solar energy lease. To some extent, this makes sense.

Does leasing land for solar farms pay off?

Landowners and communities throughout North America are seeing first-hand how leasing land for solar farms and other renewable energy projects pays off. Allocating a portion of your land to lease for an energy project opens up a diversified and dependable income stream.

All solar farms connect to a specific point on the electrical grid, the vast network of wires that connects every power generation plant to every home and business that consumes power. That point is called the "point of interconnection," or POI.
