

## Solar panel power generation connected to inverter

In this situation, a grid-tie inverter, which is actually an AC inverter, allows the solar power generated by the solar panels to convert into useable AC power. When the sun is not shining, your inverter uses power from the electricity grid.

This gets at one of the major differences between wind turbines and solar panels: wind turbines need an outlet through which they can safely discharge excess power, solar panels do not. Whether you're charging your batteries or ...
