

Solar photovoltaic power generation snow removal equipment

Is a domino-like snow removal system based on photovoltaics self-heating (pvsh)?

In this paper, a domino-like snow removal system (DSRS) based on photovoltaics self-heating (PVSH) was designed and investigated to overcome this application challenge. The domino-like snow removal strategy is first proposed, whose core idea is to use the energy from uncovered PV modules to accomplish snow removal in PV systems string by string.

Can a photovoltaic power station remove snow?

Manual snow removal, which is usually done using high-pressure water guns or cleaning brushes, is one of the main methods used in many photovoltaic power stations (Gao, 2013). Although this method is simple and environmentally friendly, its snow removal efficiency is low.

Can a solar system remove snow from a grid-connected PV system?

Scientists in China have developed a new snow-removal system for grid-connected PV systems that uses electricity from uncovered PV modules to remove snow from solar arrays, string by string. The system, called the 'domino-like snow removal system' (DSRS), makes very little use of grid electricity.

Can solar power be used for rapid snow removal?

It is also feasible to use utility power for rapid snow removal when solar radiation is weak or fluctuant in grid-connected PV systems. The proposed DSRS brings new ideas and research directions for the future development of snow removal methods for PV systems.

Can DSRs based on photovoltaics self-heating reduce snow accumulation on PV modules?

Snow accumulation on PV modules hinders normal power generation which is a challenge for the wide-scope application of photovoltaics in snowy regions. In this paper, a domino-like snow removal system (DSRS) based on photovoltaics self-heating (PVSH) was designed and investigated to overcome this application challenge.

Does snow removal affect the performance of PV modules?

The key conclusions are as follows: From the comprehensive experimental results of the long-term effect of photovoltaics self-heating, the snow removal method is verified to have no negative impact on the performance of PV modules;

For PV systems, installing a curved 'venturi' deflector at and pointing the top of the PV panel against the direction of the wind can help ensure that snowdrifts or water-bearing winds do not make contact with the surface of the panels, ...
