

Solar power generation address

Where can I find solar resource data?

Explore solar resource data via our online geospatial tools and downloadable maps and data sets. Access our tools to explore solar geospatial data for the contiguous United States and several international regions and countries.

How much solar power will a new roof generate?

NREL estimates that an average of 3.3 million homes per year will be built or will require roof replacement--representing a potential of roughly 30 gigawatts(GW) of solar capacity per year. If even a small fraction of these new roofs had solar installations,it could have a significant impact on U.S. solar power generation.

Where can I find information about solar energy research?

Visit our Solar Energy Research Database. Learn more about SETO's solar energy research. SETO resources can help you figure out what's best for you when it comes to going solar. Consider these questions.

What if the marker does not correspond to my solar production address?

Provide the following information If the marker does not correspond to your solar production address,use an area approach,using the +and - on the map to geographically define your GPS point. O (Opacity) modifies the opacity of the map and the visualization of solar irradiance through a color gradient defined in L (Legend).

What is a solar permit generator?

Folsom Labs, a previous Incubator awardee, developed a solar permit generator--a software engine to automatically generate standard documents for inspectors and authorities having jurisdiction (AHJs). AHJs require these documents to authorize solar arrays in their jurisdiction.

These tools are great for getting started, but make sure to work with a solar installer for a custom estimate of how much power your solar energy system is likely to generate. For its analyses, NREL uses an average system size of ...
