

Solar power generation increased in September

Will solar and wind energy lead the growth in US power generation?

Solar and wind energy will lead the growth in U.S. power generation for at least the next two years, according to EIA estimates. This report uses data from the EIA to analyze solar and wind capacity and generation over the past decade (2014 to 2023) in all 50 states and the District of Columbia.

Will solar power grow in 2026?

In 2026, solar PV surpasses nuclear electricity generation. In 2028, solar PV surpasses wind electricity generation. Over the forecast period, potential renewable electricity generation growth exceeds global demand growth, indicating a slow decline in coal-based generation while natural gas remains stable.

Will Solar Power overtake hydropower in 2022?

In 2019, wind generation surpassed the amount of electricity generated from hydropower -- a longtime leader in renewable energy. In 2022, solar overtook hydropower for the first time. Solar and wind energy will lead the growth in U.S. power generation for at least the next two years, according to EIA estimates.

How will solar PV & wind impact global electricity generation?

The share of solar PV and wind in global electricity generation is forecast to double to 25% in 2028 in our main case. This rapid expansion in the next five years will have implications for power systems worldwide.

Will solar power increase global renewable power capacity by 2030?

Globally, solar PV alone accounted for three-quarters of renewable capacity additions worldwide. Prior to the COP28 climate change conference in Dubai, the International Energy Agency (IEA) urged governments to support five pillars for action by 2030, among them the goal of tripling global renewable power capacity.

How has solar growth impacted the US?

Growth in the US is mainly driven by significant additions of utility-scale solar capacity, which made up over 80% of additions in the first six months of 2024. Solar installations totalled 20 GW from January to June 2024, a 55% increase over the same period last year. This follows a 46% increase in installations in 2023 compared to 2022.
