

Solar water tank power generation system diagram

How do you design a solar water pumping system?

When designing a solar pumping system, the designer must match the individual components together. A solar water pumping system consists of three major components: the solar array, pump controller and electric water pump (motor and pump) as shown in Figure 1.

What are the components of a solar water pumping system?

A solar water pumping system consists of three major components: the solar array, pump controller and electric water pump (motor and pump) as shown in Figure 1. Note: Motor and pump are typically directly connected by one shaft and viewed as one unit, however occasionally belts or gears may be used to interconnect the two shafts.

What is a solar water pumping system block diagram?

The block diagram represents a general overview of the components involved in the system. The block diagram illustrating the main components and their interactions in a typical solar water pumping system: The solar panel array consists of multiple solar panels that convert sunlight into electricity.

What data should be included in a solar water pump design?

The specific data would be the size of the inlet and outlet that the water pipe would be connected to. Figure 14 a, b and c shows key dimensions of the three water pumps shown in Figure 13 and used in the solar water pumping systems used in Table 7. The designer should initially use pipe that is the same size as the inlets and outlets.

What is a solar water pump?

A solar water pump theoretically consists of three key components: a pump control system that may be just an on-off switch or may be a more complex electronic unit, a motor and the pump; however, in practice they are considered as one unit and generally called the "water pump" or in this guideline the "solar water pump".

Which software was used to design a solar water pump?

PVSyst Simulation Software was used to design the solar pump. The desired outcomes include plant size, water supply amount, and optimal solar water pumping system site, comparison of factors contributing to pump design in the four different climatic zones.
