

# Southern Power Grid Photovoltaic Panel Price Inquiry Table

How much does a solar panel installation cost?

The average cost of a 10.8 kW solar panel installation on EnergySage is \$20,948 after federal tax credits. You'll probably save anywhere from \$28,000-\$120,000 over 25 years by going solar. Solar panels are just 12% of the total cost of a solar panel installation.

Where can I find a report on solar energy costs?

This report is available at no cost from the National Renewable Energy Laboratory (NREL) at Feldman, David, Vignesh Ramasamy, Ran Fu, Ashwin Ramdas, Jal Desai, and Robert Margolis. 2021. U.S. Solar Photovoltaic System Cost Benchmark: Q1 2020 Golden, CO: National Renewable Energy Laboratory. NREL/TP-6A20-77324.

What are the Q1 2021 PV and energy storage cost benchmarks?

Based on our bottom-up modeling, the Q1 2021 PV and energy storage cost benchmarks are those listed in Table ES-2: 1 Profit is one of the differentiators of "cost" (aggregated expenses incurred by a developer or installer to build a system) and "price" (what an end user pays for a system).

How much does a solar PV system cost in 2020?

When using 2020 PV plus storage LCOE model assumptions, the 2020 value rises from 20.1¢/kWh to 21.5¢/kWh. 26 In this year's report, we change residential financial assumption from a third-party-ownership model to one in which homeowners finance the cost of a system through their mortgage.

How many solar panels are enough to power a house?

One solar panel is not enough to power a house. Home solar systems typically feature 10-20 panels to produce enough power to offset 100% of the average household electricity consumption.

Who are the 11 references for solar photovoltaics with energy storage?

11 References Ardani, Kristen, Eric O'Shaughnessy, Ran Fu, Chris McClurg, Joshua Huneycutt, and Robert Margolis. 2017. Installed Cost Benchmark and Deployment Barriers for Residential Solar Photovoltaics with Energy Storage: Q1 2016

$r$  = PV panel efficiency (%)  $A$  = area of PV panel ( $m^2$ ) For example, a PV panel with an area of 1.6  $m^2$ , efficiency of 15% and annual average solar radiation of 1700 kWh/ $m^2$ /year would generate:  
 $E = 1700 * 0.15 * 1.6 = 408$  kWh/year 2. ...
