

Specifications and models of galvanized sheeting for photovoltaic brackets

What is solar photovoltaic bracket?

Solar photovoltaic bracket is a special bracket designed for placing, installing and fixing solar panels in solar photovoltaic power generation systems. The general materials are aluminum alloy, carbon steel and stainless steel. The related products of the solar support system are made of carbon steel and stainless steel.

Which material should be used for photovoltaic (PV) support structures?

When it comes to selecting the material for photovoltaic (PV) support structures, it generally adopts Q235B steel and aluminum alloy extrusion profile AL6005-T5. Each material has its advantages and considerations, and the choice depends on various factors. Let's compare steel and aluminum for PV support structures:

What types of solar photovoltaic brackets are used in China?

At present, the solar photovoltaic brackets commonly used in China are divided into three types: concrete brackets, steel brackets and aluminum alloy brackets. Concrete supports are mainly used in large-scale photovoltaic power stations. Because of their self-weight, they can only be placed in the field and in areas with good foundations.

What is the best material for a PV bracket?

This characteristic makes aluminum a suitable choice for PV installations in coastal areas or locations with high humidity. At present, the main anti-corrosion method of the bracket is hot-dip galvanized steel with a thickness of 55-80 mm, and aluminum alloy with anodic oxidation with a thickness of 5-10 mm.

What is the difference between ZM310 C profile and hot-dipped galvanized?

The ZM310 C Profile steel structure has a higher corrosion resistance than hot-dipped galvanized coating. The aluminum-magnesium coating on the ZM310 C Profile is lighter than hot-dipped galvanized products, primarily used as a bracket part for solar panels. Its service life is up to 50 years.

What materials are used in solar support system?

The general materials are aluminum alloy, carbon steel and stainless steel. The related products of the solar support system are made of carbon steel and stainless steel. The surface of the carbon steel is hot-dip galvanized and will not rust for 30 years in outdoor use.

QBH Adjustable Solar Panel Tilt Mount Bracket System is suitable for the flat tin roof solar panel tilting brackets with great flexibility both for commercial and residential roof solar system. Patented and innovative rail design, certified ...
