

The current status of photovoltaic bracket development

How many GW DC of photovoltaics are installed in 2023?

The International Energy Agency (IEA) reported that in 2023, 407-446 gigawatts direct current (GW dc) of photovoltaics (PV) was installed globally, bringing cumulative PV installs to 1.6 terawatts direct current (TW dc). China continues to dominate the global market, representing ~60% of 2023 installs, up 120% year-over-year (y/y).

How many GW of photovoltaic installations are there in the world?

As a result of sustained investment and continual innovation in technology, project financing, and execution, over 100 MW of new photovoltaic (PV) installation is being added to global installed capacity every day since 2013, which resulted in the present global installed capacity of approximately 655 GW (refer Fig. 1).

Why is the solar PV panel market so competitive?

The high level of competition in the solar PV panel market, mainly due to the future market demand in and the competitiveness of leading countries, is compounded by the fact that transporting solar energy equipment is less cumbersome than transporting other renewable technologies (such as wind).

How has the growth in PV markets impacted the power industry?

The exponential growth seen in PV markets has led to the development of large-scale power plants, which has increased demands for better tools for inspection and monitoring.

Are solar PV installations eligible for government rebates?

Once accredited with the Clean Energy Council, solar PV installations are eligible for government rebates such as Small-scale Technology Certificates and feed-in tariffs.

Is the future of solar PV employment bright?

Despite setbacks, there is reason to believe that the future of solar PV employment is nonetheless bright, given the urgency for more ambitious climate and energy transition policies, as well as the expectation that countries are learning important lessons on the design and coherence of policies.
