

# The development history of China's microgrid

Why is micro-grid important in China?

Micro-grid is becoming an important aspect of future smart grid, which features control flexibility, improved reliability and better power quality. This paper conducts an overview of research and development of micro-grids in China. There are abundant renewable resources in China, which can benefit the development and application of micro-grids.

Will China build a micro-grid?

Finally, in recent years, China continues to formulate new policies to encourage the construction and development of micro-grid. "The National Energy Board will build 30 micro-grids demonstration project during "the twelfth 5-year". Preliminary estimates by 2015, China's investment on microgrid will reach 3.167 billion yuan." reported in .

What is the future development direction of microgrids in China?

The future development direction of microgrids in China will therefore be towards an energy system that integrates electricity, gas, water, and heat resources, achieves mutual coupling, and solves the problems of efficient energy utilization and peak regulation .

What technologies are needed to develop China's microgrids?

The key technologies for the development of China's microgrids that require further special attention are control technology, intelligent protection technology, power electronics technology, renewable energy technology and energy storage technology. (1) Control technology

Do microgrid technologies face new challenges in China?

After years of development in China, microgrid technologies have achieved remarkable results, but there are still a lot of smart device issues that need to be addressed throughout the entire microgrid system. At the same time, microgrid technologies faces new challenges under the background of the new era of electricity sector development.

Is micro-grid development a good idea in Asia Pacific?

Generation capacity from renewable energy sources is growing at an unprecedented rate in the Asia Pacific region. According to a recent report from Navigant Research, cumulative investment in microgrids across the region will total \$30.8 billion from 2014 to 2023. Development of micro-grid in China also has many advantages.
