

The photovoltaic inverter cannot communicate

When do I need to reconfigure my inverter communication?

You may need to reconfigure your inverter communication in certain cases, such as when your Wi-Fi network or password has changed. To configure your inverter communication: click "Inverter Communication" in the menu. Refer to the steps above, under "Connect to Your Inverter". The status of your Wi-Fi connection should be 'disconnected'.

How do I Configure my inverter communication?

To configure your inverter communication: click "Inverter Communication" in the menu. Refer to the steps above, under "Connect to Your Inverter". The status of your Wi-Fi connection should be 'disconnected'. To connect to your Wi-Fi network, click "configure". Select your preferred wireless network and insert a password, then click "join."

How do I know if my inverter is communicating?

A steady blue light indicates the inverter is communicating. Connect to the device using SetApp. Navigate to Monitoring Communications. This page shows the current connection status. Use the Troubleshooting section in this guide to identify any steps needed to help resolve the communications issue.

Why is my solar inverter NOT working?

This error occurs when the current flowing through the inverter is too high, and can be caused by a variety of factors such as a short circuit or a faulty solar panel. This error occurs when the voltage supplied to the inverter is too low, and can be caused by issues such as a weak battery or a faulty panel.

Can a solar inverter cause a fault?

Like any piece of equipment, solar inverters can experience faults and errors that can disrupt the operation of the solar system. In this section, we will discuss some of the common error faults that may occur in a solar system inverter in Australia.

How do I know if a microinverter is failing to communicate?

Identifying the communication failure. We will check the microinverter's behaviour and correct functioning by looking at the PV array. Click on the View tab to see the microinverter layout. Microinverters failing to communicate will be shown in grey on the PV array. (vs black, when they are communicating but not producing).

If the answer is no production recorded at all, the issue may be as simple as your inverter losing connectivity with the internet. This is perhaps the most common way that an inverter "fails," and it's a straightforward fix that ...
