

There are holes around the aluminum frame of the photovoltaic panel

What is a solar panel frame?

A solar panel frame is a frame made of aluminum that seals and secures the parts of a solar panel, like the solar cells and glass. It is like the main part of PV solar panels. It is really important in putting together a solar panel. A machine called a solar panel framing machine is used in the process of making solar panels.

How to make aluminum solar panel frame?

Let us understand the production process of aluminum solar panel frame. 1. Extrusion of solar aluminum frame aluminum profile, put the aluminum round cast rod into the extruder, extrude it through the frame aluminum profile die, immediately air-cooled and quenched, and quickly cooled down. 2. The solar aluminum frame is straightened.

Why do solar panels need aluminum frames?

Aluminum frames offer several advantages, making them a preferred choice for most solar panel installations: Corrosion Resistance: Aluminum frames are naturally corrosion-resistant, ensuring a longer lifespan for the solar panels. Lightweight: The lightweight nature of aluminum frames simplifies transportation and installation.

How big should a frame-less PV module be?

Average is around 3 to 3.5mm. A frame-less PV module should be around 4mm. The holes on the back of a PV frame make it easy to install the panels on a mounting structure. However there are more and more mounting solutions that offer an alternative to the 'old fashioned' frames. One good solution is the use of clamps on frame-less modules.

What is a solar panel framing machine?

It is really important in putting together a solar panel. A machine called a solar panel framing machine is used in the process of making solar panels. It helps to position and secure the solar cells, back sheets, and other parts inside an aluminum frame. We will learn about the structures and components of machines used for making solar panels.

What are the different types of solar panel frames?

Customization: Aluminum frames can be easily customized to fit specific solar panel sizes and designs. Reduction in Thickness: Aluminum frames are designed to minimize the thickness of the overall solar panel module, enhancing its efficiency. Now that we've covered the basics, let's explore the various types of solar panel frames available:
