

Using solar energy to generate electricityEnglish

How is solar energy generated?

Solar energy - Electricity Generation: Solar radiation may be converted directly into solar power (electricity) by solar cells, or photovoltaic cells. In such cells, a small electric voltage is generated when light strikes the junction between a metal and a semiconductor (such as silicon) or the junction between two different semiconductors.

How do people use solar energy?

People now use many different technologies for collecting and converting solar radiation into useful heat energy for a variety of purposes. We use solar thermal energy systems to heat: Solar photovoltaic (PV) devices, or solar cells, convert sunlight directly into electricity.

Do solar panels generate electricity at night?

Solar panels generate no electricity at night time. Solar panels can't store energy, so you have to use the electricity they generate when the sun is shining. You need batteries to store the energy generated. These are expensive. - Solar cells convert the light from the sun into electricity.

How does a solar photovoltaic system generate electricity?

A solar photovoltaic system produces electricity directly from the sun's light through a series of physical and chemical reactions known as the photovoltaic effect. Let's examine each of these systems in more detail. How does solar thermal generate electricity? How do photovoltaic solar panels generate electricity?

Should you use solar power to generate electricity at home?

Using solar power to generate electricity at home is a very appealing option for a number of reasons: not only would you be reducing your overall environmental footprint and greenhouse gas emissions, but you would be reducing your bills and could even generate some income by selling back excess energy into the grid.

Is solar power the cheapest way to generate electricity?

If you are looking into options for making your house more eco-friendly and saving some money, solar power is probably one of the most attractive renewable energy options. In fact, solar power is becoming the cheapest way to generate electricity, according to Bloomberg New Energy Finance analysts.
