

# What are the consequences of poor lamination of photovoltaic panels

What happens if a solar panel is delaminated?

Counting on the severity of the delamination, the problem usually begins at the edge of the solar panel until it spreads. Glass-manufactured and thin-film or frameless PV panels, in particular, can suffer the most damage when corrosion and moisture issues go uncontrollable.

How does delamination affect a PV module?

Apart from module reliability and performance, delamination can have a severe impact on the safety of the PV module. It has been reported that delamination at the edge of the PV module can cause electrical risk that can affect the module as well as its installation.

How to reduce the degradation of photovoltaic systems?

The degradation of photovoltaic (PV) systems is one of the key factors to address in order to reduce the cost of the electricity produced by increasing the operational lifetime of PV systems. To reduce the degradation, it is imperative to know the degradation and failure phenomena.

Does backsheet delamination affect the optical performance of PV modules?

Backsheet delamination does not have a direct impact on the optical performance of the PV module, however, delamination at the front-side at cell-encapsulant or glass-encapsulant interface can directly impact the module operation. In this regard, the grey appearance along the front side delamination has been investigated in detail.

Why do PV modules have abnormal degradation rates?

For instance, the National Renewable Energy Laboratory (NREL) developed accelerated stress tests to examine degradation rates, validating the superior quality and long-term reliability of PV modules. However, despite these measures, there are still reports of abnormal degradation rates in PV modules due to a variety of failures.

How is a solar panel laminated?

PV lamination is a proven concept and works as follows: In order to laminate a solar panel, two layers of ethylene-vinyl acetate (EVA) are used in the following sequence: glass /EVA /solar cell strings /EVA /tedlar polyester tedlar (TPT). Ready for lamination.
