

What is the current cost of wind power generation

How much does a wind turbine cost?

The typical wind turbine is 2-3 MW in power, so most turbines cost in the \$2-4 million dollar range. Operation and maintenance runs an additional \$42,000-\$48,000 per year according to research on wind turbine operational cost. See the National Renewable Energy Laboratory's website for the most recent (December 2022) Cost of Wind Energy Review.

How much power does a wind turbine produce?

One megawatt = 1,000,000 watts of power. One megawatt can power about 1000 homes for a month but in reality, wind turbines don't come close to producing their rated capacity because of changing wind speeds. Wind turbines cost more the bigger they get, but they produce more electricity with larger nacelles and turbine blades.

Why did wind turbine prices rise in 2022?

Rising costs, and government pricing structures present constant challenges to manufacturers. In 2022, Nordex raised its turbine prices (approximately 12%) due to cost increases and rising interest rates; other turbine manufacturers increased prices as well. In 2023, wind turbine prices were more steady.

What are the cost and performance data for wind technologies?

In the 2024 ATB, the cost and performance data for wind technologies are specified for different resource categories that are consistent with those used to represent the full wind resource in the National Renewable Energy Laboratory (NREL) Regional Energy Deployment System (ReEDS) model (Brown et al., 2020).

Does wind energy continue to grow in 2021?

U.S. wind energy continued to grow in 2021, providing low-cost clean energy to millions of Americans. Three market reports released by the U.S. Department of Energy detail trends in wind development, technology, cost, and performance through the end of 2021 (and in offshore wind through May 2022).

How much wind energy was installed in 2020?

More wind energy was installed in 2020 than any other energy source, accounting for 42% of new U.S. capacity. The U.S. wind industry supports 116,800 jobs.

The report highlights wind power's slower recovery from global inflationary pressures, resulting in upward revisions for both onshore and offshore wind costs over the next decade. Despite this, updated analysis reaffirms that ...
