

# What solar panels should be used with power towers

What is a solar tower?

A solar tower, also known as a solar power tower, is a way to concentrate solar power to make it a more powerful energy source. Solar towers are sometimes also called heliostat power plants because they use a collection of movable mirrors (heliostats) laid out in a field to gather and focus the sun at the tower.

Can solar tower power plants work without sunlight?

Solar tower power plants are large-scale solar energy generation setups that use mirrors called heliostats to capture sunlight. Since solar towers rely entirely on sunlight, they are one of the most sustainable and greenest options for energy generation. However, you may be thinking, can they work in the absence of sunlight? The answer is yes!

Are solar power towers sustainable?

In addition, systems generating solar energy, like the solar tower power plant, are sustainable and comparatively cheaper than conventional Photovoltaic systems. Solar power towers are highly reliable. Comparatively, PV systems fall slightly behind in this regard as they rely highly on direct sunlight.

Do solar power towers require a lot of fuel?

It does not require any fuel, only abundant and free sunlight. Solar Power Towers do not produce any harmful emissions or waste. The Solar Power Tower system is currently the most expensive form of solar power. Its construction requires a vast area of land. Compared to Stirling systems, its efficiency is lesser.

Are solar tower power plants suitable for commercial applications?

Solar tower power plants are large-scale setups, making them perfectly suitable for commercial applications. Among the most notable solar tower plants, one of the biggest solar towers produces 650 GWh of energy per year. In addition to commercial applications, there have been numerous attempts to use them for other innovative applications as well.

Are solar towers a reliable energy source?

Therefore, it produces no emissions. Moreover, newer solar towers that use molten salts for energy storage can continue producing electricity even without sunlight. Hence, solar towers can work 24/7 without any interruptions due to the weather, making them a very reliable energy source.
