

# Which company produces cadmium telluride photovoltaic panels

What is cadmium telluride solar technology?

In the United States, scientists and manufacturers are working to expand production of cadmium telluride solar technology. Cadmium telluride is a type of "thin film" solar cell, and, as that name suggests, it's much thinner than a traditional silicon cell.

Will cadmium telluride solar power 1 million homes?

In June, the solar manufacturer First Solar said it would invest \$680 million in a third cadmium telluride solar factory in northwest Ohio. When the facility is finished, in 2025, the company will be able to make 6 gigawatts' worth of solar panels in the area. That's enough to power roughly 1 million American homes.

Are cadmium telluride solar panels better than silicon solar panels?

These cells can be produced more quickly than silicon cells, using less energy and water. But there's still room for improvement in the cells' performance. Today's best silicon solar panels convert roughly 25% of the sun's energy into electricity, and cadmium telluride tends to lag behind that.

Is the cadmium telluride sector scaling up?

Especially, she noted, since the cadmium telluride sector is already scaling up. In June, the solar manufacturer First Solar said it would invest \$680 million in a third cadmium telluride solar factory in northwest Ohio. When the facility is finished, in 2025, the company will be able to make 6 gigawatts' worth of solar panels in the area.

Where are cadmium telluride panels made?

Meanwhile, First Solar is building new manufacturing facilities to expand production of its cadmium telluride panels. The company opened its first factory in India earlier this year and now manufactures in four countries--India, the US, Malaysia, and Vietnam.

Do cadmium telluride panels use polysilicon?

Although cadmium telluride panels don't use any polysilicon, First Solar has felt other challenges facing the industry, like pandemic-induced backlogs in the maritime shipping industry. In April, First Solar told investors that congestion at American ports was holding up panel shipments from its facilities in Asia.

Cadmium telluride (CdTe) is a photovoltaic (PV) technology based on the use of a thin film of CdTe to absorb and convert sunlight into electricity. CdTe is growing rapidly in acceptance and now represents the second most utilized solar cell ...

Overview History Background Technology Materials Recycling Environmental and health impact Market viability Research in CdTe dates back to the 1950s, because its band gap (~1.5 eV) is almost a perfect match

## Which company produces cadmium telluride photovoltaic panels

to the distribution of photons in the solar spectrum in terms of conversion to electricity. A simple heterojunction design evolved in which p-type CdTe was matched with n-type cadmium sulfide (CdS). The cell was completed by adding top and bottom contacts. Early leaders in CdS/CdTe cel...

OverviewTechnologyHistoryMarket historyMarket performanceInstallationsSee alsoExternal linksFirst Solar, Inc. is a publicly traded American manufacturer of solar panels, and provider of utility-scale PV power plants, supporting services that include finance, construction, maintenance and end-of-life panel recycling. First Solar uses rigid thin-film modules for its solar panels, and produces CdTe panels using cadmium telluride (CdTe) as a semiconductor. The company was founded in 1...

Silicon . Silicon is, by far, the most common semiconductor material used in solar cells, representing approximately 95% of the modules sold today. It is also the second most abundant material on Earth (after oxygen) and the most common ...
