

Which forests can be used for wind power generation

Are forest wind farms good for the environment?

According to the Bavarian state forest enterprise in Regensburg, the small clearings caused by forest wind farms reduce the density of the forest area and have a positive ecological impact on the forest ecosystem. TÜV SÜD has proved that energy yields are not enhanced by further deforestation beyond the areas required for the turbines.

Which regions favor wind power generation?

We identified regions with high power densities, low seasonal variability, and limited weather fluctuations that favor wind power generation, such as the American Midwest, Australia, the Sahara, Argentina, Central Asia, and Southern Africa.

Can monoculture forestry be used as a wind farm site?

Within the scope of option contracts, experts are currently assessing about 100 locations on land owned by the Bavarian state forest enterprise, Bayerische Staatsforsten, for their suitability as wind farm sites. Areas of monoculture forestry, especially, offer the opportunity for profitable and environmentally compatible wind farms.

Who can invest in a wind farm?

In addition, local administrations, municipal utilities, energy co-operatives and residents may have the possibility of investing in the wind farm. Locating wind farms in forest areas was only made economically feasible in recent years by rapid progress in wind turbine technology.

Are wind farms causing deforestation?

The socio-environmental impact of wind farms does not end with the issue of massive deforestation of Amazonian rainforest. Many of the regions in Europe that host these wind farms are experiencing serious socio-economic and environmental disruption from ever-larger wind turbines.

What is a land-based wind power plant?

With multiple wind turbines working together, land-based wind energy plants can provide power to the U.S. electric grid to power homes, businesses, and more. The 63-megawatt Dry Lake Wind Power Project in Arizona was the first utility-scale wind power project in the United States.
