

Will photovoltaic panels be damaged after being soaked in water

Are solar panels leaking water?

Water damage from deteriorated or old seals is another common pain point for solar panel owners. This is similar to insulation or sealing issues with window panes. As the sealant ages, it becomes less effective and allows water to leak through. When this happens, it can lead to short-circuiting and may degrade the components of your solar panels.

Can solar panels be submerged in water?

The exterior of solar panels is pretty well sealed with just aluminum and glass, so solar panels themselves are not a concern when it comes to sitting in water. However, the wiring should not be submerged, and it's generally not recommended to install solar panels on roofs if other options are available.

What happens if a solar panel gets flooded?

A non-waterproof solar panel may get flooded with water, causing less sunlight to reach the solar cells or even breaking individual cells. If this happens, they will likely not produce the power needed to fulfill their production warranty promise, and your solar manufacturer will replace any water-damaged panels.

How do I protect my solar panels from water damage?

To best avoid water damage, take the time to reseal each panel or have a licensed solar panel contractor do this for you. Upon inspection, an expert will also be able to gauge if anything else can be done to maintain your solar panels.

Can solar panels get wet?

Those that are water-resistant can get wet, while those that aren't shouldn't get wet. Hence, based on the make of your solar panel, it might be at risk of getting damaged when wet. Generally, water-resistant solar panels are more expensive than those that aren't. However, non-water-resistant portable solar panels can quickly get damaged when wet.

What happens if a solar panel is damaged?

If one part of a solar panel is damaged, the energy output loss is considerable - almost as if you lost the entire panel. By installing more and smaller solar panels instead of fewer, larger ones, you can reduce the loss of energy output caused during a hail storm.
