

How many GW of wind power are there in 2022?

The worldwide total cumulative installed electricity generation capacity from wind power has increased rapidly since the start of the third millennium, and as of the end of 2022, it amounts to almost 900 GW.

How many offshore wind power companies are there in China?

In the global ranking of cumulative and newly added offshore wind power capacity, Chinese enterprises account for 6 places. There are Electric Wind Power, Mingyang Intelligent, Yuanyuan Energy, China National Offshore Installation, Goldwind Technology, and Dongfang Electric.

How big is China's Wind power market?

At this point, the top five wind turbine manufacturers hold nearly 60% of the global market share. According to the report, in 2022, China's newly added wind power installed capacity reached 49.2GW, a year-on-year decrease of 12%.

Which countries produce the most wind energy in 2022?

In the context of regional growth, the Middle East, Latin America, South East Asia, and Africa saw their combined contributions to wind power generation increase from 8% to a promising 10% in 2022. China, the global leader in wind energy generation, produced a staggering 466.5 MWh in 2022, accounting for over 40% of the world's wind energy.

What role does China play in global wind power development?

China once again plays an exceptional role in driving global wind power development - according to estimates, the country added 75 Gigawatt in 2023. The new record was only broken thanks to China, which accounts for 65% of the global market for new wind turbines - up from 58% in 2022.

Why did wind capacity increase 36% in 2023 compared to 2022?

Image by Goldwind on Facebook. Wind capacity additions worldwide surged 36% in 2023 compared to 2022, reaching a record high of 118 GW, according to data from BloombergNEF (BNEF), released today. The higher installations were driven by a boom in China, while new additions elsewhere increased only 8% compared to 2022, the research provider said.

1 · Wind capacity additions worldwide surged 36% in 2023 compared to 2022, reaching a record high of 118 GW, according to data from BloombergNEF (BNEF), released today. The higher installations were driven by a boom in ...
