

# Wind turbine generator 3mw

What is a 3 MW wind turbine?

Our 3 MW turbines range from 3.2 to 4.2 MW power output, and includes the 4.0-137, our highest performing turbine for Class III winds. Our 3 MW wind turbines share drivetrain and electrical system architecture with each of those systems being scaled and upgraded for improved performance and greater energy production, as compared to previous models.

Why is Suzlon launching a 3 MW wind turbine generator?

Suzlon introduced the new 3 MW series to unlock unviable sites and to deliver improved energy yield suitable for all wind regimes. The S144 wind turbine generator is one of the largest in India, extendable up to 3.15 MW, depending on site wind conditions, available at a hub height of 140 meters going up to 160 meters by its serial launch.

What is a 3MW platform wind turbine?

Proven technology built with world-class components and a state-of-the-art control system, the 3MW platform wind turbines are engineered for high reliability, optimal performance, and efficiency.

What is a 3MW turbine?

turbines are known. Turbine models within the 3 MW platform share drivetrain and electrical system architecture, with both systems scaled and upgraded for improved performance and greater energy production, as compared to the 3MW PlatformGE's 3MW platform can be customized based on nameplate, rotor dia

How does a 3MW onshore turbine work?

Our 3MW onshore turbine is engineered to operate at variable speeds and uses a doubly fed asynchronous generator with a partial power converter system, as well as active yaw control to keep the blades pointed into the wind.

What is a GE Vernova 3 MW turbine?

GE Vernova's 3 MW platform machines are three-blade, upwind, horizontal axis wind turbines with a rotor diameter of 117, 130 and 137 meters. The turbine rotor and nacelle are mounted on top of a tubular steel tower, with a range of hub height options that includes 85-, 110-, 131.4-, 134- and 164.5-meter variants (and site specific).
