

Does a solar power system have a lightning protection system?

Figure 5 shows an appropriate integrated lightning protection system for a sample solar power system located on a building at roof level, while figure 6 depicts a free field solar panel farm equipped with a lightning protection system. Both examples include the discussed air termination network, SPDs and earthing system.

Do rooftop photovoltaic systems need a lightning protection system?

This guideline also requires that LPL III and thus a lightning protection system according to class of LPS III be installed for rooftop PV systems (> 10 kWp) and that surge protection measures be taken. As a general rule, rooftop photovoltaic systems must not interfere with the existing lightning protection measures.

Is lightning protection necessary for PV systems?

Consequently, effective lightning protection is indispensable for PV systems. Lightning transient evaluation of a PV system has been a necessary task in designing effective LPS. Such evaluation has been addressed experimentally and numerically. Stern and Karner [10] investigated the induced voltages of a single panel in the laboratory.

Can lightning cause a photovoltaic system failure?

Lightning can cause photovoltaic (PV) system failures as lightning that strikes the system from a great distance away, or even between clouds, can generate high-voltage surges.

Can a PV mounting system carry a lightning current?

The metal components of the PV mounting system must be connected to the external lightning protection system in such a way that they can carry lightning currents (copper conductor with a cross-section of at least 16 mm² or equivalent).

Does a lightning protection system need to be installed on a building?

The energy released by a lightning discharge is one of the most frequent causes of fire. Therefore, personal and fire protection is of paramount importance in case of a direct lightning strike to the building. At the design stage of a PV system, it is evident whether a lightning protection system is installed on a building.

The new VPU PV series surge protection module has been designed to optimize protection of the inverter against overvoltage. The arrester is configured for a system voltage of 1500 V and is designed directly for the connection of 2-MPP ...
